## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AgWC Contacts competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. AgWC contacts (silver-tungsten carbide contacts) are electrical contact materials made of silver (Ag) and tungsten carbide (WC). They are widely used in electrical equipment that requires high arc tolerance and medium conductivity, such as circuit breakers, contactors, power switches, etc. Silver provides good electrical and thermal conductivity, while tungsten carbide significantly enhances the material's hardness, resistance to welding, and resistance to arc erosion. AgWC contacts are usually manufactured using powder metallurgy, with common ratios of AgWC 65/35, 60/40 or 50/50, and the specific ratio is selected based on the load intensity and switching frequency of the application environment. Compared with AgW contacts, AgWC materials have higher thermal stability and service life, and are suitable for high-frequency breaking and medium-to-high current load scenarios, especially in medium-voltage equipment, rail transit, and heavy industrial electric control systems.

The global AgWC Contacts market size was estimated at USD 228.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
