Abstracts

In this report, AI Agents in Customer Service refers to customer service applications that use an agentic architecture on top of AI foundation models to emulate human support representatives. These agents engage with users over voice or text, continuously track intent across turns, and autonomously handle queries, troubleshooting, transactions, and other service needs. Beyond conversational responses, they can orchestrate actions by calling external tools and enterprise systems such as CRMs, ticketing platforms, and line-of-business applications, turning ?understanding and replying? into ?understanding, deciding, acting, and being observable.? Conceptually, they can be thought of as:AI agent CS ? traditional intelligent CS ? (stronger perception + longer-term memory) + (decision-making + execution + observability).The term intelligent customer service is used as an umbrella for all AI-enabled service systems, whereas AI agent?based customer service represents the more advanced generation.

The global AI Agents in Customer Service market size was estimated at USD 2535.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 36.10% during the forecast period.
