Abstracts

AI-Based Baggage Inspection System is a security inspection solution that uses machine learning, computer vision and deep learning technologies to automatically detect and analyze baggage contents. Such systems are gradually changing the traditional manual security inspection model and improving security inspection efficiency and accuracy. From a regional perspective, North America, Europe, and China are currently the leading markets, but emerging markets such as Southeast Asia and India also show significant growth potential. In the future, AI-based baggage inspection systems will continue to evolve towards greater intelligence, efficiency, and seamlessness. Deep technological integration: Computer vision, RFID, big data, and other technologies will be more closely integrated to build a comprehensive intelligent system from inspection and tracking to disposal. With advances in robotics and AI reasoning capabilities, more aspects of baggage handling will be unmanned, further reducing labor. In the post-pandemic era, providing contactless baggage check-in and tracking services will become a key investment direction for airports and airlines, and AI technology is central to achieving this goal.

The global AI-Based Baggage Inspection System market size was estimated at USD 218.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
