## Abstracts

An AI-based lie detector is an efficient tool that utilizes artificial intelligence technology, particularly computer vision and machine learning algorithms, to comprehensively analyze an individual's physiological signals, facial expressions, and voice characteristics to determine the truthfulness of their statements. Characterized by its efficiency, objectivity, and multi-dimensional analysis capabilities, it operates covertly to continuously monitor and process large volumes of data, demonstrating its superiority in various fields such as security, legal, and human resources. Despite its clear advantages in accuracy, adaptability, and learning optimization, the AI-based lie detector faces limitations in accuracy constraints, the complexity of identifying emotional states, cultural differences, and legal and ethical controversies, which together define its necessity and challenges in practical applications, making it a technology with both potential and the need for cautious use.
