Report Overview:

Artificial Intelligence (AI) is a branch of computer science that tries to teach a computer to think, learn, and perform tasks like a human. Instead of simply being coded to do a particular job, high-powered electronic appliances are loaded with the power of AI, which does not simply instruct it to do a particular job, but actually programs it such that it learns and adapts to user's behavior and patterns. AI cameras are simply cameras that use AI programs to wisely deal with images and videos. Computational photography is usually the core of an AI-powered camera. The subject of computational photography is generally split into subsets of technology trying to mimic what humans do, such as voice recognition, voice-to-text composition, image/face recognition, computer vision, and machine learning.
