Abstracts

A chatbot is a software application used to conduct an on-line chat conversation via text or text-to-speech, in lieu of providing direct contact with a live human agent. Designed to convincingly simulate the way a human would behave as a conversational partner, chatbot systems typically require continuous tuning and testing, and many in production remain unable to adequately converse or pass the industry standard Turing test. The key players of global AI Chatbots market includes IBM, [24]7.ai, Google, Nuance Communications, AWS and so on. In 2019, the top 5 companies accounted for a total market share of about 33%, among which [24]7.ai is in the dominating position, with occupying nearly 9% of global market. The growth of the AI chatbot market is driven by several key factors, ranging from advancements in technology to increasing business and consumer demands. 24/7 Availability: Businesses increasingly rely on AI chatbots to provide round-the-clock customer support. Automation reduces the need for large customer support teams, cutting operational costs. Chatbots handle queries instantly, improving customer satisfaction. Improved Natural Language Understanding (NLU): AI chatbots can better understand and respond to complex queries, creating more human-like interactions. Technologies like OpenAI's GPT-4 enable contextual, coherent, and dynamic conversations. Enhanced language support allows businesses to cater to global audiences.

The global AI Chatbots market size was estimated at USD 6042.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 51.00% during the forecast period.
