Abstracts

The AI Defect Detection System is an automated inspection solution that integrates machine vision and deep learning technologies. It collects product surface images through high-resolution optical sensors, and uses convolutional neural networks (CNN), YOLO and other algorithms to intelligently analyze images, automatically extract defect features and identify quality problems such as scratches, cracks, foreign matter, and dimensional deviations. It also supports real-time feedback of inspection results to the production system to trigger early warnings or process adjustments. The system breaks through the traditional rule-driven inspection's reliance on preset thresholds, and can adapt to complex defect patterns through massive data training. It can achieve sub-micron inspection accuracy in high-precision scenarios such as electronic manufacturing, automotive parts, and semiconductor packaging, significantly improving inspection efficiency and yield, and becoming a core tool for intelligent quality inspection in the Industrial 4.0 era.

The global AI Defect Detection System market size was estimated at USD 1430.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.70% during the forecast period.
