Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Digital Chassis competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Along with the industrial changes brought about by the intelligentization and electrification of automobiles, the automobile chassis system is also evolving in multiple directions and in an intelligent manner. Traditional chassis drive, braking, steering, suspension and other systems rely on mechanical connections and hydraulic systems to operate independently, while the digital chassis uses digital technology to bring together the various subsystems of the chassis for control, which can better coordinate the various systems. The digital chassis uses digital technology to coordinate the control of drive, braking, steering, suspension, etc., and the major car companies have different technologies for these executive hardware, among which the difference is particularly obvious in the suspension part. According to the different forms of the suspension system, it can be mainly divided into three categories: air suspension, fully active hydraulic suspension, and pure electric fully active suspension system.

The global Digital Chassis market size was estimated at USD 3594.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 28.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Digital Chassis market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
