## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI ISP SoC competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global AI ISP SoC production reached approximately 7.67 million units with an average global market price of around k US\$14 per unit. Single-line annual production capacity averages 50 k units with a gross margin of approximately 30-35%. The upstream of the AI ISP SoC industry chain primarily includes key components such as image sensors, AI processors, memory, and power management, which are mainly concentrated in the semiconductor and electronics manufacturing sectors. Downstream applications are led by the smart security field, accounting for approximately 40% of the market consumption, followed by the intelligent office field at about 20%, the intelligent robotics field at around 15%, the aerospace field at about 10%, and other fields collectively occupying the remaining 15% of the market share. An AI ISP SoC (Artificial Intelligence Image Signal Processor System-on-Chip) is an integrated circuit that combines image signal processing capabilities with AI functionality to enhance image quality and enable advanced features such as scene recognition, object detection, and real-time image enhancement. This SoC is designed to process images directly on the device, reducing the need for cloud processing and enabling real-time decision-making, which is particularly useful in applications where low latency and privacy are critical.

The global AI ISP SoC market size was estimated at USD 230.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.00% during the forecast period.
