Abstracts

AI NDT Solution refers to the use of artificial intelligence technologies, such as deep learning, machine learning, computer vision, etc., to automatically process, analyze and diagnose the large amount of data generated in the non-destructive testing process (such as ultrasonic signals, X-ray images, thermal imaging data, etc.). It simulates the manual inspection process through algorithms and learns based on a large amount of data to achieve automatic identification, classification and quantitative evaluation of internal defects, cracks and other problems in materials, thereby improving the efficiency, accuracy and reliability of non-destructive testing, reducing human intervention and misjudgment and missed judgments. At the same time, it can establish a complete, scientific and standard inspection process, quantify and record all data, improve data traceability, and predict the type and location of defects that may occur in equipment or materials by analyzing historical inspection data, optimize the inspection process, and bring innovative solutions to the field of industrial inspection.
