## Abstracts

AI server is a high-performance computing device designed for artificial intelligence applications. BBU (Battery Backup Unit) plays a vital role in AI server. When the main power supply of AI server fails, the system will automatically switch to BBU power supply, and quickly write cache data stored in dynamic random access memory (DRAM) to the backup solid-state hard disk (SSD) to provide stable power support. The core component of BBU is the battery, which uses lithium battery cells, with the advantages of long life, small size and high efficiency. At the same time, the size and occupied space of BBU are relatively flexible, and can be laid out according to actual needs to improve space utilization. As an important component of AI server, BBU for AI server plays an important role in power backup, energy efficiency improvement, flexible layout and other aspects. With the rapid development of AI technology and the expansion of application scenarios, the market demand for BBU continues to increase, technology continues to innovate, and application scenarios are further expanded.

The global AI Server BBU market size was estimated at USD 364.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
