Abstracts

DrMOS integrates MOSFET and driver IC, effectively improving conversion efficiency, increasing power density and reducing device size. DrMOS integrates 2 power MOSFETs and driver IC into one chip, adopts chip packaging technology, optimizes power circuit and drive circuit internally, and can minimize the influence of parasitic inductance and capacitance; in addition, the overall size of the system is further reduced, and the power density is greatly improved, which can meet the more stringent overclocking work of high-end motherboards and improve overall efficiency. DrMOS adds current and operating temperature detection functions internally, and the current and operating temperature signals are output to the PWM controller or CPU/DSP (digital controller), which can not only perform system control and feedback adjustment, but also protect the safe operation of power devices and improve system reliability. On the basis of ordinary servers, AI servers usually add 4 to 8 GPUs. The multi-phase power supply composed of multi-phase controller and DrMOS is also a power supply solution for GPUs. Compared with CPUs, GPUs have higher power consumption, and the demand for multi-phase power supplies is further increased. This report counts the AI server DrMos power chip market. An AI server is a specialized computing system designed to handle the intensive computational tasks associated with artificial intelligence applications. Unlike standard servers, AI servers are optimized with high-performance hardware, such as Graphics Processing Units (GPUs), to efficiently process large volumes of data and execute complex algorithms. This optimization enables them to support various AI workloads, including machine learning, deep learning, and neural network training. The AI server market is a segment within the broader technology sector focused on the production and distribution of servers optimized for AI tasks. This market has been expanding as businesses across various industries adopt AI technologies to improve efficiency, automate processes, and gain competitive advantages. The growing demand for AI servers is closely linked to the

increased utilization of AI applications in areas such as data analytics, autonomous vehicles, healthcare, and financial services. The growing demand for specialized AI hardware, including GPUs and TPUs, is driving the DrMos Power Chip industry. These components provide high performance for complex computations in AI tasks. As organizations invest in advanced AI applications, the need for hardware designed for these workloads increases. This trend is boosting the adoption of AI servers with GPUs and TPUs to meet the needs of modern AI solutions.

The global AI Server DrMos Power Chip market size was estimated at USD 312.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.30% during the forecast period.
