Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Server HBM competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. AI Server HBM (High Bandwidth Memory) is a type of ultra-fast, high-density DRAM integrated into AI servers to handle the massive data throughput required by GPUs, TPUs, and AI accelerators. Unlike traditional DDR memory, HBM uses a 3D stacked architecture connected through TSV (Through-Silicon Vias), enabling extremely wide data buses and much higher bandwidth at lower power consumption. In AI servers, HBM is critical for training and inference workloads such as deep learning, natural language processing, and large-scale recommendation systems, as it reduces memory bottlenecks and accelerates parallel data processing. This makes HBM a foundational memory technology for next-generation AI computing infrastructure. In 2024, global AI Server HBM production reached approximately 803 K units, with an average global market price of around US\$ 600 per unit.

The global AI Server HBM market size was estimated at USD 481.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global AI Server HBM market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
