Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Server MOSFET competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. AI server MOSFETs are metal-oxide-semiconductor field-effect transistors designed and optimized specifically for powering the high-performance computing units of AI servers. Their core function is to serve as high-speed switches in voltage regulator modules. Through extremely high switching frequencies and minimal conduction losses, they efficiently and accurately convert input power to the low-voltage, high-current requirements of computing cores such as GPUs, CPUs, and ASICs. They must meet the extreme AI computing requirements of ultra-high power density, high switching frequencies, extremely low on-resistance, excellent thermal performance, and high reliability. They are the "core execution unit" for efficient power conversion in the AI server power supply chain. By 2024, production of AI server MOSFETs will reach approximately 14.4 million units, with an average global market price of approximately US\$5 per unit. The upstream supply chain comprises advanced super-junction or SiC process manufacturing, the midstream focuses on optimized designs for low on-resistance and high switching speeds, and the downstream manufacturers of server power supplies and GPU VRMs. Despite substantial production capacity, products that meet the extreme performance requirements of servers are in short supply. Their gross profit margin, approximately 40-50%, is significantly higher than standard products, reflecting their added value in performance, efficiency, and reliability.

The global AI Server MOSFET market size was estimated at USD 72.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.80% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global AI Server MOSFET market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
