## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Server Rail competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global production of AI server rails will reach 12.9305 million sets, with an average selling price of US\$40.71 per set and a gross profit margin of 32.5%-77.5%. Companies have an annual production capacity of 480,000 sets. Upstream raw materials primarily include sheet metal, plastic components, and hardware accessories. Sheet metal primarily includes galvanized sheet metal, cold-rolled sheet metal, and stainless steel. Market supply is ample, and prices are primarily influenced by fluctuations in metal commodity prices. Downstream customers include Huawei, H3C, Inspur, ZTE, Sugon, NVIDIA, Google, and AWS. Server rack rails are metal brackets or frames used to mount and secure servers within server racks or cabinets. They are designed to support and protect electronic equipment such as servers, network equipment, and other data center equipment. Server rails are typically made of sturdy materials such as steel or aluminum. A single AI server requires four to six sets of rails. With the official mass production and shipment of AI servers, sales momentum is gradually shifting from traditional general-purpose servers to high-value-added AI and cloud-specific models, driving significant increases in gross profit margins and operating margins.

The global AI Server Rail market size was estimated at USD 526.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
