Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI SSD competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of AI SSD will reach 264k units, with an average selling price of US\$2000 per unit. AI SSDs are new solid-state drives that combine high-speed storage with AI acceleration technology. They typically integrate dedicated AI chips (such as NPUs/ASICs/FPGAs) on top of traditional NVMe/PCIe SSDs. They can perform tasks such as inference, data preprocessing, compression acceleration, encryption and decryption locally, thereby reducing the overhead of data transmission to the CPU/GPU, lowering latency and energy consumption, and improving the overall AI performance of edge devices or servers. AI SSDs are primarily based on NAND Flash chips, manufactured by companies such as Samsung, Kioxia, Micron, SK Hynix, and Western Digital. They are also used in data centers by companies such as Google, Intel, IBM, and Huawei.

The global AI SSD market size was estimated at USD 528.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.30% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global AI SSD market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
