Abstracts

AI Surface Inspection System is an automated inspection solution based on machine vision and deep learning technology. It collects product surface images through high-resolution optical sensors or industrial cameras, and uses deep learning algorithms such as convolutional neural networks (CNN) and YOLO to intelligently analyze images, automatically extract defect features and identify surface quality problems such as scratches, cracks, foreign matter, and dimensional deviations. It also supports real-time feedback of inspection results to the production system to trigger early warnings or process adjustments. The system breaks through the traditional rule-driven inspection's reliance on preset thresholds, and can adapt to complex defect patterns through massive data training, achieving sub-micron inspection accuracy in high-precision scenarios such as electronic manufacturing, automotive parts, and semiconductor packaging, significantly improving inspection efficiency and yield, and becoming a core tool for intelligent quality inspection in the Industrial 4.0 era.

The global AI Surface Inspection System market size was estimated at USD 1973.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.50% during the forecast period.
