## Abstracts

AI Talent Management Software is an integrated digital solution that leverages artificial intelligence, big data analytics, and cloud computing to optimize the full employee lifecycle management. It integrates core modules including intelligent recruitment (AI resume parsing, candidate matching), performance management (real-time feedback, 360-degree evaluation), learning and development (personalized skill recommendations, competency mapping), and talent retention (turnover risk prediction, sentiment analysis). By automating repetitive HR tasks, generating data-driven insights, and enabling personalized employee experiences, it transcends traditional transactional tools to become a strategic asset that aligns talent management with business objectives, ensuring compliance with data security regulations while enhancing organizational efficiency and workforce agility. Demand for AI Talent Management Software is growing rapidly driven by global enterprise digital transformation, the need for refined talent operations, and the popularization of remote/hybrid work models. It addresses pain points such as inefficient manual HR processes, inaccurate talent assessment, and difficulty in identifying skill gaps, with strong demand from large enterprises seeking integrated platforms and SMEs preferring lightweight SaaS solutions. Key business opportunities lie in developing industry-specific solutions (for finance, manufacturing, healthcare), integrating generative AI for intelligent content creation (job descriptions, development plans), and enhancing DEI (diversity, equity, inclusion) analytics and compliance capabilities. Additionally, tapping into the underserved SME market with cost-effective, modular products and expanding ecosystem integration with HR services will further unlock high-growth potential in the global talent management technology market.

The global AI Talent Management Software market size was estimated at USD 1326.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
