Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Toy Chips and Modules competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global output of AI Toy Chips and Modules will reach 888.119 million pieces, with an average selling price of US\$2.1 per piece. The main control chips for AI toys are primarily Wi-Fi MCUs or SoCs with Wi-Fi capabilities. Cloud-based models for AI toys require a high cost-performance ratio, and Wi-Fi chips can meet the basic needs of AI toys for voice recognition, simple conversations, emotional responses, and networking. To support large AI models on the software side, chips must stably run complex AI tasks with low power consumption, instantly process voice, image, and other information, and drive rapid toy responses and interactions. This requires low power consumption and sustained operation. The upstream of the AI toy industry chain consists of IP operations and software and hardware supply. Hardware includes chips, sensors, speakers, microphones, and batteries, while software includes voice recognition and large AI models. AI toy chips and modules fall into the upstream segment of the industry chain. Downstream are AI toy manufacturers, including Mattel, Rastar Group, Alpha Group, Goldlok Holdings (Guangdong) Co., Ltd., Shifeng Cultural, and Zhejiang Jinke Tom Culture Industry Co., LTD. Monetization models for AI toys include toy hardware sales and subscription services for consumers, and movement sales and toy AI SaaS service fees for businesses.

The global AI Toy Chips and Modules market size was estimated at USD 1865.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.00% during the forecast period.
