A stabilizer is a device used to slow down or eliminate the shaking of a shooting device when it is moving or handheld, aiming to ensure a smooth and steady picture. The AI tracking stabilizer integrates artificial intelligence tracking technology on the basis of the traditional stabilizer, which can automatically identify and continuously track the subject to achieve intelligent shooting control. It has an integrated gyroscope and accelerometer, which can monitor the posture and motion status of the device in real time, and accurately correct various jitter interferences through high-precision adjustment of the motor or servo system to improve shooting stability. This type of equipment is widely used in various shooting scenes such as movies, TV series, Vlog, documentaries, etc., and is particularly suitable for professional occasions that require long lenses or dynamic shooting. The AI tracking stabilizer not only significantly improves the picture quality, but also provides photographers with greater creative freedom, allowing them to easily capture unique perspectives. In addition, it is also of great value in scenes that require continuous and stable output, such as wedding photography, and helps to achieve high-level, professional-level visual performance.
