Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Traffic Lights competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global AI Traffic Lights production reached approximately 19 K units, with an average global market price of around US\$ 65,000/unit. AI Traffic Lights are signalized intersection systems that apply machine perception and optimization algorithms to adjust phases, splits, cycles and offsets in (near) real time, evolving the classic pretimed/actuated control into data-driven adaptive signal control integrated with standards like NTCIP 1202 for controllers and SAE J2735 SPaT/MAP for V2X. Upstream inputs include edge AI compute modules, imaging sensors/lenses, radar/lidar detectors, V2X RSU/OBU modules, ATC controllers/cabinets, and cloud/ATMS software; downstream customers are city/state DOTs and agencies deploying adaptive control, transit priority, emergency preemption, VRU protection, and connected-intersection services. Production capacity varies significantly among manufacturers, with gross profit margins ranging from approximately 30% to 50%.

The global AI Traffic Lights market size was estimated at USD 1227.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.50% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global AI Traffic Lights market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
