## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on AI Training-Inference Integrated Chip competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. AI Training-Inference Integrated Chips combine both deep learning model training and inference capabilities within a single hardware platform. Unlike traditional architectures that separate training and inference across different systems, these chips enable end-to-end AI workflows—from model optimization to real-time deployment—on the same device. They enhance computational efficiency, reduce latency and power consumption, and are well-suited for edge computing, data centers, and intelligent devices. Key features include high throughput, programmability, and the ability to handle large-scale model training and low-precision inference simultaneously.

The global AI Training-Inference Integrated Chip market size was estimated at USD 175.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.90% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global AI Training-Inference Integrated Chip market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
