Abstracts

AI virtual human live streaming services refer to a service format that uses digital virtual avatars driven by artificial intelligence technology to achieve human-like interaction in live streaming scenarios. It comprehensively utilizes technologies such as computer graphics, multimodal AI, real-time rendering, and motion capture to create virtual avatars with human appearance, behavior, and even emotional expression capabilities. Relying on technologies such as natural language processing (NLP), speech recognition and synthesis (ASR/TTS), and large language models (LLM), these avatars can "understand" user questions and autonomously generate fluent dialogues, enabling 24/7 uninterrupted live streaming interaction. AI virtual human live streaming services have broad prospects and are moving from "technology breakthroughs" to "deep application development." In the next 3-5 years, with the deep integration of multimodal large models and AIGC technologies, digital humans will gradually evolve from L1-L3 to L4-L5, achieving more natural, scriptless, real-time interaction. Its application scenarios will also expand from e-commerce live streaming to penetrate the entire industry chain, including finance, government affairs, culture and tourism, and healthcare, becoming an intelligent hub connecting the physical and digital worlds. Despite current challenges such as homogeneous competition and platform compliance reviews, the trend of technology democratization is irreversible, and the barriers to developing and using digital humans are significantly decreasing. Ultimately, AI virtual humans will not only be tools for reducing costs and increasing efficiency, but will also combine with intelligent agents to build a large-scale "digital human army," profoundly reshaping the paradigm of human-computer interaction and the development landscape of the digital economy.

The global AI Virtual Human Live Streaming Service market size was estimated at USD 4462.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 34.00% during the forecast period.
