Report Overview

AiP is a technology that integrates an antenna and a chip into a package to achieve system-level wireless functions. The dielectric materials of the package antenna are mainly ceramic, organic, and molding compounds, and the conductor materials are gold, silver, and copper. It implements one or more antennas in the IC package and can carry bare radio frequency chips (transceivers). AiP can be further integrated with front-end components (for example, power amplifier (PA) or low noise amplifier (LNA)), switches, filters, and even power management integrated circuits (PMIC) to form an antenna module-package (SiP) using System-in technology.
