Abstracts

An air barrier material resists air leakage and is designed to form a continuous plane around a building to prevent uncontrolled air movement in and out of the building envelope. Energy efficiency regulations and standards in the construction industry continue to drive the demand for air barrier membranes. These membranes are essential components of building envelopes designed to reduce air leakage and improve thermal performance. Sustainability and environmental considerations are influencing construction practices. Air barrier membranes, when properly installed, can contribute to improved energy efficiency and reduce greenhouse gas emissions by minimizing the need for heating and cooling.
