Abstracts

An air mattress, also known as an airbed, is an inflatable mattress, the majority of which are usually made of polyvinyl chloride (PVC), although recently developed textile-reinforced urethane plastic or rubber versions exist. The deflated mattress can be rolled up or folded and carried or stored relatively easily, making them a popular choice for camping trips and for temporary bedding at home for guests. They are inflated either orally by blowing into a valve, or with a manual foot-powered or more commonly inflated via an electric pump. Some are even automatically inflating (up to a certain pressure?some additional inflation is also needed) just by opening the valve.

The global Air Beds market size was estimated at USD 2576.33 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 0.03% during the forecast period.
