Report Overview:

Air Bubble Detectors are ultrasonic devices used to detect air bubbles in fluid-filled tubes. One method of bubble detection is the propagation time measurement by ultrasonic technology. The application possibilities are in the medical, pharmaceutical and food technology fields. The sensors are used to monitor dialysis machines, infusion pumps or transfusions.

In medical technology, air bubble detectors (ABD) ensure bubble-free infusions or bubble-free flow in heart-lung machines. With suitable shielding of the electronics, non-magnetic Piezo Technologies can even be used in extreme environments, such as in the field of magnetic resonance tomographs. Examples of industrial applications include control technology, such as the monitoring of dosing and filling machines.
