Abstracts

The air caster rigging system for semiconductor is a precision handling equipment specially designed for the semiconductor industry. It uses air cushion technology to suspend and transport large equipment. It is particularly suitable for transporting semiconductor equipment that is sensitive to the surface, bulky and extremely valuable. Since the surface of semiconductor equipment often requires extremely high cleanliness, any tiny dust or scratches may affect its performance, and its size and weight also make traditional handling methods neither safe nor economical. Therefore, the air caster rigging system avoids the risk of damage to the surface of the equipment with its unique non-contact handling method. At the same time, its highly precise controllability ensures the stability and safety of the equipment during the handling process. In addition, the high price of semiconductor equipment requires that the handling process must minimize losses. The advantage of the air caster rigging system is that it can meet these stringent requirements and provide the semiconductor industry with an efficient, safe and economical handling solution.

The global Air Caster Rigging System for Semiconductor market size was estimated at USD 161.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
