Abstracts

Air Chute Canvas are permeable conveyor belts used in pneumatic conveying systems to transport bulk materials in powder or granular form. These fabrics have a specialized design that allows air to pass through, creating an air-supported layer that helps in the smooth and efficient movement of materials. On the other hand, fluidizing fabrics are used in industrial applications to facilitate the controlled aeration and fluidization of powdered materials in silos, hoppers, or containers. These fabrics promote the even flow and discharge of powders by introducing air from below, preventing issues like bridging and clogging. Both Airslide and fluidizing fabrics play crucial roles in material handling and processing industries.

The global Air Chute Canvas market size was estimated at USD 136.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
