Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Air Conditioner Aluminum Foil competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Air Conditioner Aluminum Foil refers to specialized aluminum foil used in the fin components of air conditioner heat exchangers. It primarily serves purposes of heat conduction, corrosion resistance, and structural support. This material is characterized by excellent thermal conductivity, corrosion resistance, and formability, and is often treated with coatings or anti-corrosion layers to suit various environmental conditions. The production was 500 million Sqm and the average price was \$3.2 per Sqm. A typical single production line had an annual capacity of about 500,000 Sqm, and the average gross margin was about 10%. Upstream feedstocks are primarily electrolytic aluminum ingots and rolling equipment, with representative suppliers including Chinalco, Yunnan Aluminium, Baowu, Alcoa, Rio Tinto, RUSAL, SMS group and Danieli. The midstream covers coating formulation design, coating processes and composite finishing as the design and implementation stage. Downstream applications include residential air conditioners, automotive HVAC and commercial HVAC, with typical customers such as Gree, Midea, Haier, BYD, SAIC, Toyota, Volkswagen, Carrier and Daikin. Air Conditioner Aluminum Foil is expected to maintain steady long term growth as global demand for energy efficient cooling systems increases and regulatory standards push manufacturers toward higher heat exchange efficiency. The trend toward inverter air conditioners, ultra thin heat exchanger fins, and low noise system designs is driving the need for aluminum foils with higher strength, better formability, and improved surface treatments that enhance condensate behavior and corrosion resistance. Growth is further supported by rising installation rates in emerging markets and accelerated replacement cycles in mature regions.

The global Air Conditioner Aluminum Foil market size was estimated at USD 1600.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.00% during the forecast period.
