## Abstracts

Air-cooled chilled water heat pump units are highly efficient and energy-saving refrigeration and heating equipment suitable for a variety of occasions such as commercial buildings, industrial facilities and residential areas. Unlike water-cooled systems, air-cooled chilled water heat pumps directly use ambient air as the condensing medium and achieve heat exchange through components such as compressors, evaporators, condensers and expansion valves. In summer, it absorbs heat from indoors and dissipates it into the air through the outdoor unit; in winter, it reverses the cycle and extracts heat from the outside air for heating.

The global Air Cooled Chilled Water Heat Pump Units market size was estimated at USD 4561.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.00% during the forecast period.
