### Report Overview:

Air cooled condenser is the large industrial heat exchange equipment which uses the air in nature to cool (condensate) processing fluid. Compared to the water cooled method, it boasts advantages of sufficient and free cold source, saving cooling water and reducing environmental pollution, low maintenance cost and others. There are power plant air cooled condenser and petrochemical air cooled condenser according to different application field.

In an air cooled condenser, refrigerant condenses inside the tubes and air passes over the outside.

Fins should be used on the air-side because the coefficient of heat transfer on the air-side is lower compared to that on the refrigerant side.

The circulation of air over an air-cooled condenser may be by either natural or forced convection.

The Global Air-Cooled Condensers Market Size was estimated at USD 940.02 million in 2023 and is projected to reach USD 1182.58 million by 2029, exhibiting a CAGR of 3.90% during the forecast period.
