Report Overview

Air-cooled doubly-fed converters are mainly used in wind power generation systems to be used in conjunction with doubly-fed generators to obtain the best power generation efficiency and quality. When the wind speed changes and the generator speed changes, the converter changes the magnetic field of the rotor by controlling the excitation of the generator rotor, so that the frequency, phase, and amplitude of the generator output voltage are consistent with the power grid, thereby realizing the variable speed of the wind power generation system Constant frequency power generation. By changing the frequency, amplitude and phase of the rotor excitation current, the generator frequency, active power and reactive power can also be adjusted.
