Abstracts

An air cooled inverter chiller is a refrigeration system that uses ambient air to dissipate heat from a refrigerant cycle, with an inverter-driven compressor that adjusts its speed based on real-time cooling demand, resulting in improved energy efficiency, reduced operational noise, and more precise temperature control compared to fixed-speed chillers. These systems are widely used in commercial, industrial, and large residential applications for air conditioning, process cooling, and data center thermal management, offering advantages such as lower installation complexity (no cooling tower or water loop required), reduced water consumption, and suitability for regions with water scarcity or stringent environmental regulations.
