## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Air-cooled Laser Marking Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Air-cooled laser marking machine is a laser marking device that uses an air cooling system for heat dissipation. It is used to make permanent marks on the surface of various materials, such as text, serial numbers, QR codes, patterns, etc. Its core feature is that it uses air cooling methods such as built-in fans or heat sinks, and does not require an external water cooler, thus achieving advantages such as compact structure, convenient use, and low maintenance cost. Air-cooled laser marking machine is a laser marking equipment that dissipates heat through air cooling. It has significant advantages such as compact structure, low energy consumption, maintenance-free, and easy installation. Compared with traditional water-cooling systems, this equipment does not require external cooling devices, which reduces the overall operation and maintenance costs. It is particularly suitable for small and medium-sized enterprises, small-batch production or working environments with limited space. With the improvement of industrial automation level, the enhancement of product traceability requirements and the advancement of green manufacturing concepts, the application of air-cooled laser marking machines in electronic components, hardware tools, food and drug packaging, automotive parts and other fields has gradually expanded, especially favored by end users with high requirements for flexibility and convenience. At the same time, its "plug and play" feature also helps it to penetrate rapidly in emerging markets, and the market potential is considerable. Air-cooled laser marking machines still face some challenges. First, air cooling has a heat dissipation bottleneck under high power or long-term continuous working conditions, which limits its use in heavy-load industrial scenarios. Secondly, with the intensification of market competition, product

homogeneity is common, price wars are frequent, and corporate profit margins are compressed. In addition, end users' requirements for marking accuracy, speed and system reliability are constantly increasing, which forces equipment manufacturers to continue to innovate in laser performance, control system optimization and software intelligence. Overall, although the technical threshold of air-cooled laser marking machines is relatively low, in order to stand out in the fierce market, companies still need to continuously improve their comprehensive competitiveness and product added value.

The global Air-cooled Laser Marking Machine market size was estimated at USD 815.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.70% during the forecast period.
