Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Air-cooled Medium-pressure Compressor competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of this product reached 63,000 units, with an average selling price of \$16,500. Air-cooled medium-pressure compressors are compression devices that use air cooling for heat dissipation and typically have an output pressure range of 1.6 MPa to 10 MPa. They are widely used in gas transportation, chemical processing, food and beverage filling, shipping, mining, medical, and energy applications. Compared to high-pressure compressors, medium-pressure models are more economical in terms of structure, energy consumption, and maintenance costs. Their air-cooling design makes them independent of water sources, making them suitable for water-scarce, field, or mobile operating environments.

The global Air-cooled Medium-pressure Compressor market size was estimated at USD 1040.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
