Abstracts

Air-cooled rack-mounted load box is a power load device that is cooled by air flow and is widely used in various industrial and data center environments. It usually adopts a rack-mounted design, which is easy to install and integrate, and can provide the necessary load and power support for high-power electronic equipment. Air cooling technology helps air flow through built-in fans or radiators to take away the heat generated during the operation of the equipment and ensure the stable operation of the equipment. The air-cooled rack-mounted load box has a simple structure and low cost, and is suitable for conventional applications that do not require particularly high heat dissipation. It is widely used in data centers, communication equipment, laboratories and other places that require a stable power supply. Although air cooling technology may not have a better heat dissipation effect than liquid cooling systems under high-density and high-power loads, it is widely used due to its cost advantages, simple installation and convenient maintenance, and is particularly suitable for occasions that do not require extremely high heat dissipation efficiency.

The global Air-Cooled Rack-Mount Load Bank market size was estimated at USD 117.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
