Abstracts

An air cooled welding torch is a handheld device used in arc welding processes to direct the electrode, transmit electrical current, and deliver shielding gas to the weld area, relying on ambient air circulation rather than liquid coolant systems to dissipate the intense heat generated during operation. These torches are typically lighter, more compact, and less complex than their water-cooled counterparts, making them suitable for lower-amperage applications, light- to medium-duty welding tasks, and environments where portability and simplicity are prioritized. Commonly used in processes such as MIG (Metal Inert Gas) and TIG (Tungsten Inert Gas) welding, air cooled torches are characterized by their ease of maintenance, lower upfront cost, and suitability for intermittent use, though they may have limitations in sustained high-amperage welding due to heat buildup.

The global Air Cooled Welding Torches market size was estimated at USD 312.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
