Report Overview

The air covered wire machine is a professional equipment used to produce covered wire, also called air-filled wire. This machine works by enveloping fibers or other materials in air to create lightweight, soft, filament-like structures that are often used in stuffed toys, pillows, mattresses, clothing and other products. The working principle of the air-coated fiber machine is to feed the fiber into the machine and at the same time form a filament-like structure under specific environmental conditions through air flow. This kind of machine is usually equipped with various control systems and adjustment devices to ensure the production of coated wire that meets the requirements. Air-coated wire machines are widely used in furniture, textiles, toys and other industries. They can produce silky filling materials that are light, soft and have a certain elasticity, ensuring the comfort and quality of products.
