## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Air-curable Conductive Copper Pastes competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Air-curable Conductive Copper Pastes production reached approximately 1,260 Tons with an average global market price of around US\$450 per ton. Air-curable Conductive Copper Pastes are innovative conductive materials designed to solidify at room temperature through exposure to air, obviating the need for additional thermal treatment or chemical curing processes. Upon contact with air, these pastes progressively lose their fluidity to form a solid film with superior electrical conductivity. This material streamlines production processes, reduces energy consumption, while maintaining high conductivity and resistance to oxidation, ensuring efficient and cost-effective manufacturing of electronic components. Moreover, after curing, the material retains excellent solderability, facilitating the assembly of electronic components, with its quick-curing attribute enabling potential for continuous and automated production lines.

The global Air-curable Conductive Copper Pastes market size was estimated at USD 567.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
