Report Overview

Air displacement micropipette is a laboratory tool for sampling, dispensing, or transferring liquids, typically used for handling small amounts of liquids. It moves the liquid by air exhaust, hence the name gas emission micropipette. It usually consists of a handle and a replaceable volumetric pad head, which controls the piston inside the pipette to push outward through a button on the handle, creating a negative pressure to draw liquid into the pad head, and then pushing the piston inward by releasing the button so that the liquid is drained. These mechanical pipettes are often capable of accurately measuring and transferring very small volumes of liquids, such as microliters of liquids.

The global Air Displacement Micropipette market size was estimated at USD 320.45 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
