Abstracts

An air driven gas booster is a pneumatic device that utilizes compressed air to amplify gas pressure, operating on the principle of differential piston areas to generate higher output pressures from a lower input air supply; these systems are widely used in applications requiring precise, clean, and safe pressure intensification?such as gas charging, leak testing, and hydraulic simulation?without introducing contaminants or requiring electrical power in hazardous environments. The market for these boosters is characterized by demand across sectors including oil and gas, aerospace, automotive, and manufacturing, where reliability, explosion-proof operation, and adaptability to various gases (like nitrogen, helium, or natural gas) are critical factors driving adoption and innovation.

The global Air Driven Gas Boosters market size was estimated at USD 250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.50% during the forecast period.
