Abstracts

Air entraining agents (AEAs) are chemical admixtures added to concrete, mortar, or cement-based materials during the mixing process to introduce and stabilize microscopic, uniformly distributed air bubbles within the mixture; these non-coalescing bubbles enhance the material's durability, particularly in freeze-thaw cycles, by providing internal pressure relief voids that prevent cracking and scaling, while also improving workability and cohesiveness by reducing water demand and segregation, though they may slightly reduce compressive strength due to the introduced air volume.

The global Air Entraining Agents (Aea) market size was estimated at USD 520.75 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
