Report Overview

Air filter is a device which removes solid airborne particles that are generally harmful to human health if inhaled in the lungs. Particles include things such as dust, powder, pollen, mold, fibers, germs etc. It uses a physical and or chemical process with fibrous pleated paper, foam, cotton, ionizers, activated charcoal, absorbents, chemicals, catalysts etc., and cleans the air to the designed breathable level and odor free for the intended user. Air filters are used in applications where air quality is important, notably in building ventilation systems, transportation, public areas and industries.
