Abstracts

Air Fryer Spray refers to a type of cooking spray specifically designed for use with air fryers. It typically contains oils or fats that help prevent food from sticking to the air fryer basket or tray while also promoting even crisping and browning during cooking. The spray is formulated to work effectively at high temperatures, as air fryers cook by circulating hot air around the food. Using an air fryer spray can enhance the texture of foods like fries, chicken, and vegetables, giving them a crispy finish without the need for excess oil. Many air fryer sprays are also non-stick, making cleanup easier after cooking.

The global Air Fryer Spray market size was estimated at USD 328.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.30% during the forecast period.
