Abstracts

An air impact driver (pneumatic impact driver) is a pneumatic tool for tightening and loosening screws using compressed air from an air compressor as a power source. The hammer is rotated by an air motor, and the rotational force of the hammer is converted to impact force. The hammer strikes the anvil (rotating shaft for tightening and loosening) and applies impact to generate a strong tightening and loosening force. Air impact drivers are very useful in screw-tightening operations where human power is inadequate. Air impact drivers are used in a variety of locations, including construction sites and maintenance shops. Since they are powered by compressed air from an air compressor or other source, their rotating parts generate less heat than electric motors, making them suitable for continuous work.

The global Air Impact Driver market size was estimated at USD 742.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.40% during the forecast period.
