Report Overview

Air-independent propulsion (AIP) is any marine propulsion technology that allows a non-nuclear submarine to operate without access to atmospheric oxygen (by surfacing or using a snorkel). AIP can augment or replace the diesel-electric propulsion system of non-nuclear vessels. The correct term is Air Independent Power, not Propulsion, as the various AIP devices do not propel the submarine.

The global Air Independent Propulsion System market size was estimated at USD 725.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
