Abstracts

An air seaplane is a versatile aircraft capable of taking off and landing on water and traditional runways, enabling access to remote areas without standard infrastructure. These planes are classified into two main types: floatplanes, which have floats attached under the fuselage, and flying boats, where the fuselage itself is buoyant and serves as the main landing surface. Air seaplanes are commonly used for tourism, emergency rescue operations, cargo transport, and connecting isolated communities, especially in coastal or island regions.

The global Air Seaplane market size was estimated at USD 1419.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.70% during the forecast period.
