Abstracts

A pool heat pump is a simple and energy-efficient way to keep your pool or spa water warm all year round. But unlike a gas or electric pool heater, it doesn't actually generate heat. Instead, it pulls warmth from the air outside and uses it to heat your pool water. Here's how it works. When your heat pump is on, a fan draws warm air into the heat pump's evaporator coil. The air heats up the liquid refrigerant inside, turning it into a gas. The gas then passes through a compressor that heats it further. Once it reaches a certain temperature, it moves into the heat exchanger (a tube within a tube) and heats up your pool water. When this is done, the water returns to your pool and the gas goes back to liquid form and starts the process all over again. According to HAYWARD's financial report, the United States has more than 10.7 million swimming pools, and the number of newly added swimming pools, mainly private swimming pools, has been rising year by year. The number of new swimming pools in 2021 has reached 117,000, with an average of 1 swimming pool for every 31 people. In France, the world's second largest swimming pool market, the number of private swimming pools has exceeded 3.2 million this year, and the number of new swimming pools has reached 244,000 in just one year, with an average of 1 swimming pool for every 21 people. In the Chinese market, which is dominated by public swimming pools, an average of about 43,000 people share one swimming pool*. However, the current domestic villa stock has reached 5 million units, and the number is increasing by 130,000 to 150,000 units per year. Coupled with the popularity of small swimming pools and mini pools in urban flat-floor residences, according to industry estimates, the scale of domestic household swimming pools is at least a starting space of about 5 million units. China is already a household swimming pool market ready to go.

The global Air Source Swimming Pool Heat Pump market size was estimated at USD 1007.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 12.00% during the forecast period.
