## Abstracts

Air Source Treatment Units are devices used in pneumatic systems to regulate, filter, and condition compressed air before it reaches downstream equipment. These units typically include air filters, regulators, lubricators (FRLs), dryers, and pressure relief valves, which work together to remove contaminants, regulate pressure, and ensure optimal air quality for efficient system performance. By preventing moisture, oil, and particulates from damaging pneumatic tools and actuators, air source treatment components help improve reliability, extend equipment lifespan, and enhance operational efficiency in industries such as manufacturing, automation, and automotive applications.

The global Air Source Treatment Units market size was estimated at USD 2626.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
